

ASO[®] Ankle Stabilizing Orthosis

The Choice of Champions[™]

With an improved boot design for a better fit, the ASO ankle stabilizer maintains its leadership position in the ankle brace market. Give your athletes and patients the proven technology of the ASO ankle stabilizer. The leader continues to stay several steps ahead...

actual product

Stabilizing Straps

Angled stabilizing straps contour above the malleoli for enhanced comfort and migration resistance. They form a complete figure-eight to help stabilize the subtalar and talocrural joints.

Elastic Cuff

Circumferential woven elastic cuff with rounded edges keeps laces and stabilizing straps secure. In addition, it works in concert with the upper boot to resist the inversion or eversion forces.

CoolFlex Achilles Pad & Tongue

CoolFlex[™] padding contains spandex fiber to provide superior comfort along the Achilles tendon and dorsum of foot. The shoe lace is attached to the tongue to ensure lace is always centered.

Elastic cuff has been removed and white straps used in the above photo for illustrative purposes.

Invisible Seam

For improved comfort and durability, the seam is now positioned along the rear portion of the boot. There is no longer a seam under the foot.

Indications:

- Inversion or Eversion Ankle Sprains
- Medial or Lateral Ankle Instability
- Subtalar Joint Instability
