

# TriFib™ Wrist Support

## Targeted support for patients with TFCC injuries.

The TriFib Wrist Support is designed to help stabilize the distal radioulnar joint while maximizing patient comfort and compliance during treatment of TFCC tears.

### Innovative Design

Lace-closure system provides secure circumferential stabilization while minimizing pressure on the ulnar styloid process, enhancing patient comfort and simplifying application.

### Comfort & Compliance

Skinloc™ liner helps maintain proper positioning of the support during application and tightening. Soft, breathable materials improve comfort for extended wear.

The TriFib Wrist Support provides a low-profile, easy to apply solution for conservative management and post-procedural support of TFCC injuries.

### Indications:

- TFCC tears and TFCC injuries
- Ulnar-sided wrist pain
- DRUJ instability or irritation

Bilateral design fits left or right wrist

| Part ID | Size    | Wrist Circumference |                   |
|---------|---------|---------------------|-------------------|
| 223911  | X-Small | under 5¾"           | under 14.6 cm     |
| 223914  | Medium  | 5¾" - 7¾"           | 14.6 cm - 19.7 cm |
| 223916  | X-Large | over 7¾"            | over 19.7 cm      |
